

# LET YOUR SUPPLY CHAIN TAKE CENTER STAGE

**Discover a faster, more effective way to get a bird's-eye view of your supply chain with Spotlight.** The ability to get real-time, intuitive visuals of your profitability and costs compared against your business plan will help make sure you're making the best possible decisions for your business.

Spotlight pulls data directly from your planning software and integrates it with your business plan to help you see where you're at compared to where you need to be.

## CONNECT FINANCE, OPERATIONS, AND THE BUSINESS PLAN

Finance and supply chain work in 2 different worlds, and don't often align on a common objective, creating a gap in the decision making process. By pulling all of your supply chain data and aggregating it to one location, you are able to get all the relevant information missing from other supply chain visualization tools. Spotlight shows you the things that matter so you can see costs, profits, and how those stack up against the business plan you laid out with real time data.

## SAVE TIME COMPILING DATA AND CRUNCHING NUMBERS

While supply chain software is more necessary than ever, it can be too costly to get stuck in the noise of big data. With a fully customizable dashboard, Spotlight allows you to visualize a storyline for your organization and see bigger picture behind the numbers, so you can execute decisions based on what you see.

## MAKE SMARTER DECISIONS, FASTER

With the challenges facing supply chain professionals today, it's better to be fast than perfect. And the agility provided by your planning software cannot be fully utilized if additional resources are spent pulling information together. By streamlining the data collection process, Spotlight lets you see the right answers and solve the problems that matter to you, saving time and money and helping you get ahead of the curve.

## BRING YOUR DATA OUT OF THE DARK
